

# Digital Signage

Our software network has been built from the ground up, with both the user and reliable content delivery in mind. While ridiculously easy to use, it's versatile range of functionality makes it the first choice in any digital signage application.

Built by designers and programmers in equal measure, Click2Screen DS combines friendly and intuitive graphics with rock-solid reliability and precision. While others bombard you with an overwhelming array of grey text fields, mystery buttons and clunky work-flows, our software gives you the power to deliver your content with more confidence and ease.

Let's take a look at just how simple it is

## Our Product

Click2Screen DS is made up of two distinct parts:

- Click2Screen Admin - This is the command centre of your network. From here you can manage your file library, screen templates and layouts, and schedule all of it. Accessable through any internet connected web-browser, your secure connection to the network lets you edit your screens from anywhere in the world.

- Click2Screen Player - The player unit is the hardware box that is attached to each screen on-site. Running as a 'black-box' application, the only time you'll have to go near it after installation is to dust it down after years of solid service! Our software is built using the latest in cross-platform technology, meaning that it can run on any operating system of your choice. Check out the hardware requirements to find out more.

Consultancy

Whether you just have a question about file formats, or you need advice on starting a Digital Signage Network from scratch, we're on hand to help out. Our comprehensive knowledge and experience of design, IT and digital signage is second to none. We have overseen a wide range of projects from start to finish, and are perfectly placed to do the same for you. [Click here to find out more »](#)
